

SIH 2026

IDEA SUBMISSION & PITCH DECK

Smart India Hackathon 2026

A structured pitch deck template for teams submitting innovative solutions to India's most impactful student hackathon. Fill in your project details below to build a compelling, judge-ready submission.

Problem Statement ID

SIH1600

Problem Statement Title

[Insert Title]

Theme

[Smart Automation / Heritage & Culture / AI / Healthcare]

PS Category

[Software / Hardware]

Team ID

[Insert Team ID]

Team Name

[Insert Team Name]

Proposed Solution & Novelty

[Insert Your Project / Idea Title]

Core Solution

High-level overview of the idea, solution, or working prototype. Describe the core mechanism resolving the root problem statement.

How It Addresses the Problem

Key pain points tackled and the practical user journey from problem identification to resolution.

Innovation & Uniqueness

Novel algorithms, architecture, or domain-specific optimizations. Your clear competitive edge over existing market or open-source solutions.

Technical Approach

Technology Stack & Tools

Languages & Frameworks: Python, PyTorch, FastAPI, React / Next.js

AI / ML Models & Services: LLMs, Bedrock, Sarvam AI, OpenCV

Data & Storage: Vector DB, PostgreSQL, Redis

Hardware (if applicable): Sensors, Microcontrollers

Methodology & Process Workflow

01

Data Ingestion & Preprocessing

02

Processing, Inference & Model Pipeline

03

API & Application Logic

04

UI / User Delivery & Feedback Loop

Feasibility & Viability

Technical & Operational Feasibility

- Scalability analysis and compute requirements
- Ease of deployment and low runtime latency
- Modular architecture supporting incremental rollout

Potential Challenges & Risks

- Edge-case bottlenecks: latency, data drift, hardware constraints
- Security, privacy, or compliance limitations
- Dependency on third-party APIs or external data sources

Risk Mitigation & Strategy

- Concrete strategies to bypass each identified challenge
- Fallback mechanisms and offline / caching resiliency
- Graceful degradation under partial system failure

Impact & Benefits

Target Audience & Ecosystem

Primary end-users and beneficiaries — citizens, government bodies, and enterprises. Designed for accessibility and vernacular reach across diverse user segments.

Quantifiable Impact

Measurable time and cost savings, efficiency gains, and tangible societal or business value. Social, economic, and technical impact metrics defined and trackable.

Adoption & Long-Term Potential

Roadmap for real-world pilot rollouts, phased scalability, and sustained adoption beyond the hackathon lifecycle.

Research & References

Research Papers & Domain Studies

- Key published literature and benchmark studies cited
- Open datasets and foundational models utilized
- Peer-reviewed sources validating the technical approach

Technology & Institutional References

- Official documentation, APIs, and frameworks referenced
- Source repositories, open standards, and government initiatives aligned
- SIH problem statement guidelines and evaluation rubrics

 **Tip:** Cite all sources clearly — judges value academic rigor and transparency alongside technical innovation.
